Wood Vinegar

CASE STUDY

We noticed a significant reduction in our fertiliser needs.

Todd McNamee, the Superintendent of Mt Cooloom Golf Course, faces the typical challenges of maintaining a pristine golf course. Factors such as environmental conditions, nutrient deficiencies, and soil pH issues present ongoing hurdles in turf management.

In their quest for better turf quality, Todd and his team decided to incorporate PyroAg Wood Vinegar into their maintenance program. This decision stemmed from the desire to improve the appearance and health of the golf course.

To ensure a smooth transition and to assess any potential negative impacts, the team initially conducted trials on a limited scale. After observing no adverse effects, they expanded the application of PyroAg Wood Vinegar to cover all fairways and tees. The application process was gradual, allowing for optimal results.

Todd explains, "We integrated PyroAg into our fertiliser program without encountering any mixing issues. The rate of application remained consistent at 750mls per hectare."

"The benefits of Wood Vinegar were evident, enhancing the colour of our turf surfaces, and

after 12 months of application, we noticed a significant reduction in our fertiliser needs."

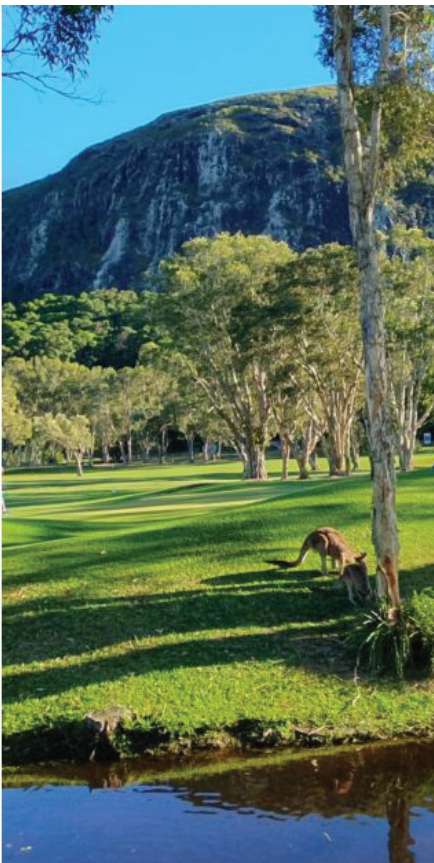

"We initially trialled PyroAg on three fairways and two tees, applying it three times, one month apart. Our priority was ensuring it didn't negatively impact our turf."

"PyroAg Wood Vinegar seemed to release stored nitrogen in the soil, making it more available to the plants."

Todd highlights a key benefit of PyroAg Wood Vinegar, stating, "PyroAg Wood Vinegar's acid formulation seems to be a game-changer. It helped lower the pH and neutralise the bicarbonates in the water, improving overall plant health and colour."

Effectively tackling challenges such as soil pH issues, nutrient deficiencies, & water quality concerns, PyroAg Wood Vinegar has proven to be a vital component in achieving & maintaining high-quality turf surfaces.

While PyroAg Wood Vinegar proved highly effective, Todd emphasises the importance of maintaining a balanced approach. "What we appreciate about PyroAg Wood Vinegar is its compatibility with all fertilisers, and we've had no issues with tank mixing."

Todd and his team are committed to continually refining their turf management practices. He says, **"We look forward to exploring more opportunities to refine our turf management practices and further harness the potential of PyroAg Wood Vinegar."**
